HOW WE CREATE VALUE

CREATING SOMETHING NEW STARTS WITH DEFINING WHERE YOU WANT TO GO, WHAT YOU WANT TO ACHIEVE. IT STARTS WITH AN IDEA, A VISION YOU EMBODY FOR SOMETHING BETTER, AN OBSESSION YOU HAVE.

AND FOR US, IT ALL STARTS WITH AN **INNOVATION**. INNOVATION IS OUR VERY PURPOSE. THROUGH INNOVATION WE HAVE THE POWER TO CHANGE LIVES. WE ARE OBSESSED WITH INSPIRING PEOPLE TO HARNESS THE POWER OF INNOVATION IN THEIR LIVES.

Why imarble ?

I-marble, an intelligent innovation from the house of Qutone is been considered as future against marble. With enhanced strength, large size, myriad designs and textures, flawless consistency and resistance to scratch, stains and bacteria it is touted as the next biggest invention. A slab equipped with superior features to beautify your interiors, cladding and flooring, it is an advancement set to revolutionise the tiles industry.

The Technology

From its inception, Qutone Ceramics has been committed to innovation with advanced technological application in its entire product range. The company has been a pioneer in several hi-tech innovations that have set trends in the tile industry.

Right from the introduction of IQ Smart, first slim flexible tiles, to high end Elegante, Qutone has upgraded itself to the fully automatic state-of-the-art modern slab plant in the world. Being first in Asia and 4th in Globe, Qutone has deployed world's latest and largest press system GEA 44000, a technology to revolutionise press system creating slabs without mould. It is the new automatic technology of power feeding system cutting various sizes uniformly. GEA 44000 facilitates creation of slab measuring upto 1600x4800mm with standard W.A of less than 0.05%.

Complete online cutting of slabs and automatic packing in specialised packaging makes the whole manufacturing process automatic ensuring 100% precision in cutting and texturing. The technology application for the processing of I-marble makes the product an intelligent innovation set to give new definitions to the meaning of tiles.

FEATURES

Installation Friendly

What makes the iMarble intelligent are the grand sizes it is available in. This makes installation a very simple task. For example, one single slab of 1200x 2400mm will replace 8 tiles of standard 600x 600mm size.

Pre-Polished

Polishing natural marble is a hard task since one has to find a mason to buff the surface of the marble. However, iMarble's processed body is highly polished and retains it for years.

Light Weight

The iMarble weighs at least 60% less than traditional and current Italian marble. This adds to the simplicity of installation and transport of the slabs.

Resin-Free

Resin is a synthetic polymer used as an adhesive for treating cracks in natural marble. iMarble uses no resin treatment as there are no cracks in it. Since resin has an adverse effect on the skin, iMarble is a far more better and healthier option than natural marble.

Zero Porosity Ensuring Anti-Fungal Life

Another quality that iMarble is imbued with is its low or zero porosity. When water settles on natural marble, it seeps in, making the marble weak, inviting fungal, algae growth, etc. With iMarble, all these problems can be avoided.

Compact Body/ High MOR

Natural marble has a very low modulus of rupture (MOR), while processed slabs of iMarble are compact made and have a very high breakage strength, making iMarble a far more stronger choice than traditional marble.

Zero Maintenance

Even when used in high-traffic areas, iMarble needs minimum care because of its low porosity, highly compact body and high hardness index.

Facades

Apart from just flooring, iMarble can be used in many other applications like, facades, lifts, ventilated and non-ventilated facades. iMarble can be installed easily by means of wet/dry cladding.

HANDLE WITH LOVE

We love our tiles so much that we treat every single piece like a queen. We pamper them with tender care and groom them in luxurious comfort that a royal lineage deserves.

Every tile is first packed individually, with specially designed cushions protecting it from all sides. The tile is then placed with another such packed piece before covering the pair in a larger package. Consequently, each tile has triple layered protection to prevent its surface from scratches and corners from chip-offs during transportation and storage.

The proof of our pampering lies in the fact that our R&D team invented a special tool called 'iCut Elegante Blade' made from diamond grid for cutting our tiles into the required shapes.

We hope that you will take care of our babies with the same love and care with which we made, transported and delivered them to you. So below we share some easy ways to ensure longevity of tiles.

- Use clean water for washing
- Use good quality non-alcoholic cleansing agent to remove the stains and retain its lustre
- Use soft smooth clean clothe for wiping
- To drill holes in the tiles, use the same diamond tools used for glass cutting
- To cut the tiles, use either waterjet cutting or 'iCut Elegante Blade' designed exclusively for these tiles

TECHNICAL SPECIFICATION

CHARACTERISTIC	INTERNATIONAL STD. ISO 13006/EN 176 GROUP	OUR VALUE
■ Deviation In Length	±0.6%	±0.3%

Disclaimer:

Colors shown are as accurate as the limitations of the printing process will allow. Prospective customers are advised to inspect a sample of the tile before ordering. Every effort has been made to ensure the accuracy of the information given. However, the company reserves the right to change the specifications without any notice. Sometimes variations in shade or size being inherent to ceramic industry may occur. Before fixing, we advice you to follow the fixing instructions on the cartons of the tiles as no responsibility can be accepted by the company once the tiles have been fixed.
